

A lot of fake modules in the market  
Such as HC-08 and CC41 is the copycat company copied from  
our products,  
If you buy a fake, please apply for a refund guarantee your  
legitimate rights and interests

JN Huamao Technology Company

Bluetooth 4.0 BLE module

Datasheet

- 2 Professional Bluetooth products suppliers.
- 2 Remote control module provider
- 2 Data transmission module provider
- 2 PIO state acquisition module provider
- 2 Customizable Bluetooth modules and Bluetooth solutions
- 2 Jinan high and new technology enterprise
- 2 SIG members

Address: D-4020, Qilu soft zone Jinan city, Shandong, China

# **The most complete, most convenient, the most stable of Bluetooth data transmission, Remote control and PIO input status acquisition module**

*---- Master and slave role in one*

*---- Remote control PIO with AT Commands*

*---- Remote acquisition of PIO input status with AT Commands*

## **1. Product Parameters**

- Ø BT Version: Bluetooth Specification V4.0 BLE
- Ø Working frequency: 2.4GHz ISM band
- Ø Modulation method: GFSK(Gaussian Frequency Shift Keying)
- Ø RF Power: -23dbm, -6dbm, 0dbm, 6dbm
- Ø Speed: Asynchronous: 2-6K Bytes  
Synchronous: 2-6K Bytes
- Ø Security: Authentication and encryption
- Ø Service: 0xFFE0 (Modifiable use AT+UUID command)
- Ø Characteristic: 0xFFE1 (Modifiable use AT+UUID command)
- Ø Characteristic: Notify and Write (Modifiable use AT+UUID command)
- Ø Power: +2.5V~3.3VDC 50mA
- Ø Power: Active state 8.5mA; Sleep state 50~200uA
- Ø Working temperature: -20 ~ +95 Centigrade
- Ø Size: HM-10 27mm x 13mm x 2.2 mm
- Ø Size: HM-11 18mm x 13mm x 2.2mm
- Ø Size: HM-15 65mm x 32mm x 16mm

## 2. Product overview

First of all, Thank you for choose our Bluetooth products.

If you want to know more about us, [www.inhuamao.cn](http://www.inhuamao.cn) could help you (Videos, New version datasheet, Module work flow, project Codes, etc.)

HM Bluetooth modules use CSR or TI CC254x or cypress chips, Master and slave roles in one, data transmission version and remote control version and PIO status acquisition version in one, Support the AT commands modify module parameters, Convenient and flexible.

### **Data Transmission version:**

Before connect:

You can configure module parameters with AT Commands through UART

After connect:

- 1) Send and receive Bluetooth data through UART.

### **Remote Control version:**

Before connect:

You can configure module parameters with AT Commands through UART

After connect:

- 1) Send and receive Bluetooth data through UART.
- 2) Remote device could configure module parameters with AT Commands
- 3) Remote device could control PIO2~PIO11 output low or high

### **PIO acquisition version:**

Before connect

You can configure module parameters with AT Commands

After connect

- 1) Send and receive Bluetooth data through UART.
- 2) Remote device could configure module parameters with AT Commands
- 3) Remote device could control PIO2, 3 output low or high with AT Commands

HM-11 has no this function

- 4) Remote device could get PIO4 ~ 11 input status with AT Commands

HM-11 only has PIO2 and PIO3.

**Module version:**

HM-01 to HM-09 is Bluetooth V2.1 version.

HM-10, HM-11 is Bluetooth V4.0 BLE version.

HM-12, HM-13 is Bluetooth Dual mode support EDR 4.0 and BLE 4.0

HM-16, HM-17 is Bluetooth V4.1 BLE version.

HM-18, HM-19 is Bluetooth V4.2 BLE version.

HM-01, HM-02, HM-09, HM-10, HM-16 and HM-18 is Pins to Pins.

HM-05, HM-06, HM-07, HM-11, HM-17 and HM-19 is Pins to Pins.

### 3. Product model

Modules	VDD	Size(mm)	Flash	Chip	BT Version
HM-01	2.5-3.7V	27 * 13 * 2.2	8M	BC417143	V2.1+EDR
HM-02A	2.5-3.7V	27 * 13 * 2.2	6M	BC31A223	V2.1
HM-02B	2.5-3.7V	27 * 13 * 2.2	6M	BC41C671	V2.1+EDR
HM-03A	2.5-3.7V	27 * 12.5 * 4.3	6M	BC31A223	V2.1
HM-03B	2.5-3.7V	27 * 12.5 * 4.3	6M	BC41C671	V2.1+EDR
HM-04A	2.5-3.7V	Not for sale			
HM-04B	2.5-3.7V	Not for sale			
HM-05/06A	2.5-3.7V	18 * 13 * 2.2	6M	BC31A223	V2.1
HM-05/06B	2.5-3.7V	18 * 13 * 2.2	6M	BC41C671	V2.1+EDR
HM-07	2.5-3.7V	18 * 13 * 2.2	8M		V2.1+EDR
HM-08	2.5-3.7V	27 * 13 * 2.5	8M	Class 1	V2.1+EDR
HM-09	2.5-3.7V	27 * 13 * 2.2	8M		V2.1+EDR
HM-10	2.2-3.7V	27 * 13 * 2.2	256Kb	CC2540/1	V4.0 BLE
HM-11	2.2-3.7V	18 * 13 * 2.2	256Kb	CC2540/1	V4.0 BLE
HM-12	2.5-3.9V	27 * 13 * 2.2	64KB	Dual mode	EDR 40 + BLE 40
HM-13	2.5-3.9V	18 * 13 * 2.2	64KB	Dual mode	EDR 40 + BLE 40
HM-14	2.2-4.0V	13 * 12 * 2.0		Dual mode	EDR40 + BLE 40
HM-15	5V	65 * 32 * 16	256Kb	CC2540	BLE V4.0
HM-16	2.1-5.5V	27 * 13 * 2.2	128KB		BLE V4.1
HM-17	2.1-5.5V	18 * 13 * 2.2	128KB		BLE V4.1
HM-18	2.1-5.5V	27 * 13 * 2.2	256KB		BLE V4.2
HM-19	2.1-5.5V	18 * 13 * 2.2	256KB		BLE V4.2

### 4. Product certificate

Products have FCC-ID, CE, RoHS. You can download certification from [www.jnhuamao.cn](http://www.jnhuamao.cn) or [www.huamaosoft.com](http://www.huamaosoft.com)

## 6. Product technical specifications

This document only include Bluetooth BLE 4.0 document, If you want to know more about other modules, [www.jnhuamao.cn](http://www.jnhuamao.cn) or [www.huamaosoft.com](http://www.huamaosoft.com) could help you.

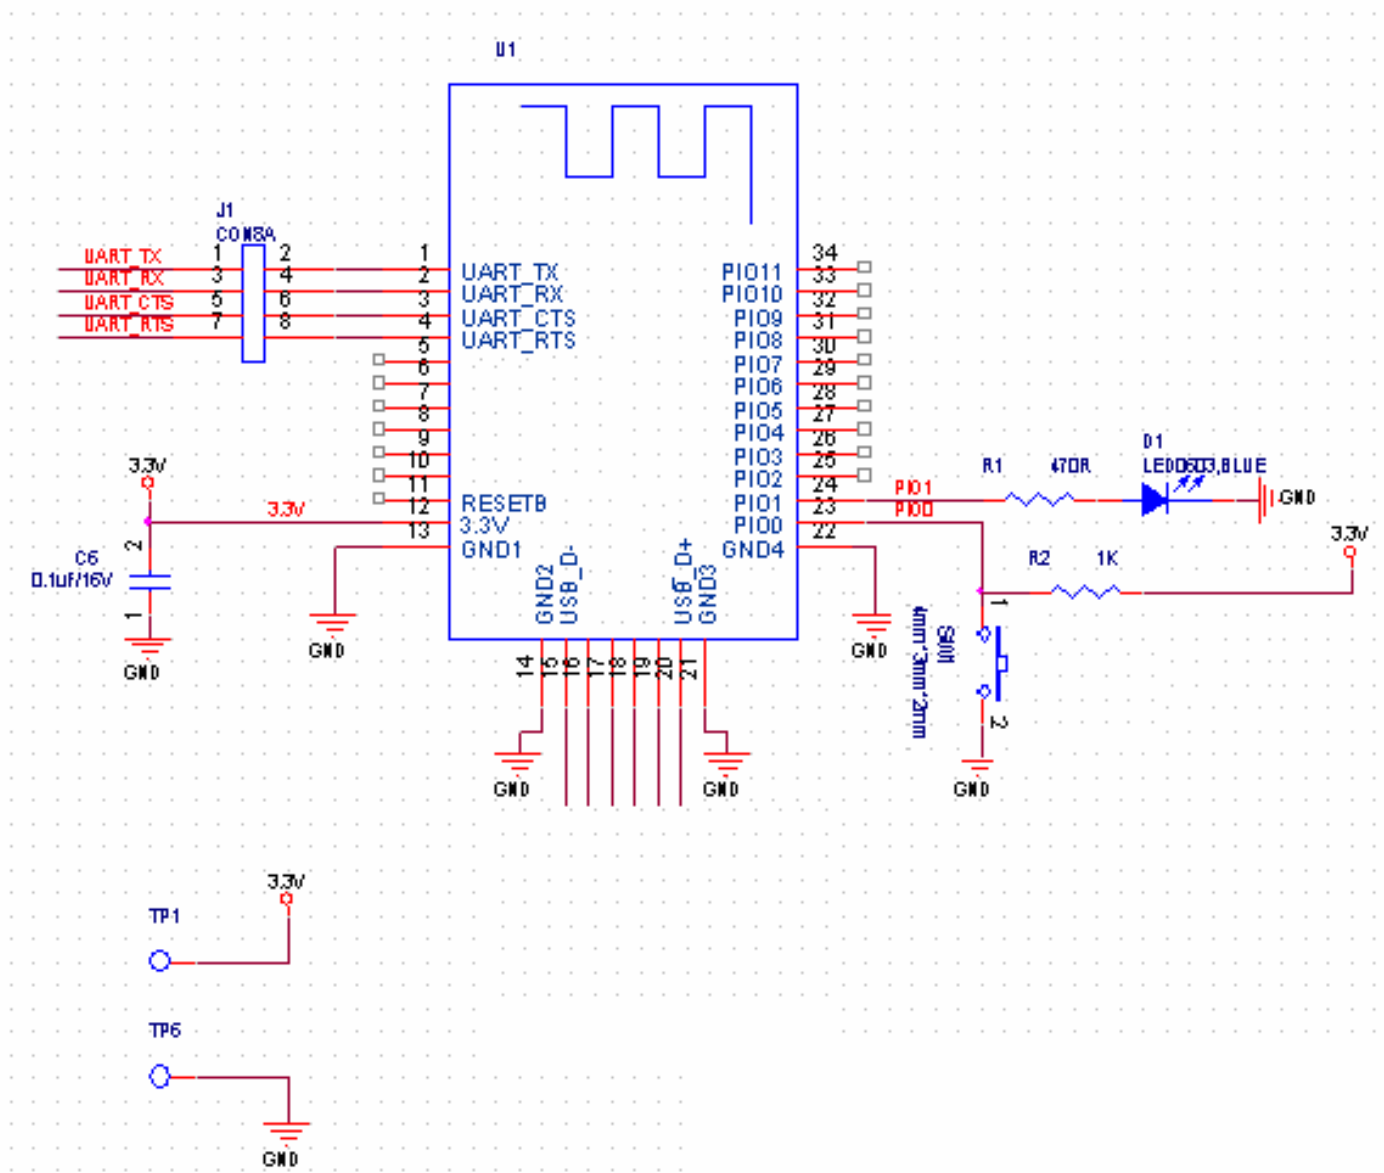

### What's different between HM-10S and HM-10C?

Left is HM-10S, It have 34 Pads. Right is HM-10C and it only have 26 Pads

HM-10C is equal HM-10S removed bottom Pads.

### 6.1 HM-10 Schematic

## 6.2 HM-10 Size

### 6.3 HM-10 package information

### 6.4 HM-10 Device Terminal Functions

HM-10S	HM-10C	Name	Description	CC254X
1	1	UART_TX	UART interface	P1_6
2	2	UART_RX	UART interface	P1_7
3	3	UART_CTS	UART interface	P1_4

4	4	UART_RTS	UART interface	P1_5
5	5	NC	NC	
6	6	NC	NC	
7	7	NC	NC	P2_2
8	8	NC	NC	P2_1
9	9	NC	NC	P2_0
10	10	NC	NC	
11	11	RESETB	Reset if low >100ms.	RESET
12	12	VCC	3.3V	
13	13	GND	Ground	
14	X	GND	Ground HM-10C doesn't have this pin	
15	X	USB_D-	USB interface HM-10C doesn't have this pin	PIN3
16	X	NC	NC HM-10C doesn't have this pin	
17	X	NC	NC HM-10C doesn't have this pin	
18	X	NC	NC HM-10C doesn't have this pin	
19	X	NC	NC HM-10C doesn't have this pin	
20	X	UB_D+	USB interface HM-10C doesn't have this pin	PIN2
21	X	GND	Ground HM-10C doesn't have this pin	GND
22	22	GND	Ground	GND
23	23	PIO0	System Key	P1_3
24	24	PIO1	System LED	P1_2

25	25	PIO2	input/output pin. PWM output	P1_1
26	26	PIO3	input/output pin/ADC	P1_0
27	27	PIO4	input/output pin/ADC	P0_7
28	28	PIO5	input/output pin/ADC	P0_6
29	29	PIO6	input/output pin/ADC	P0_5
30	30	PIO7	input/output pin/ADC	P0_4
31	31	PIO8	input/output pin/ADC	P0_3
32	32	PIO9	input/output pin/ADC	P0_2
33	33	PIO10	input/output pin/ADC	P0_1
34	34	PIO11	input/output pin/ ADC/DS18B20/DHT11	P0_0

## 6.5 HM-11 Size

## 6.6 HM-11 Package information

## 6.7 HM-11 Device Terminal Functions

No	Name	Description	CC254X
1	UART_RTS	UART interface	P1_5
2	UART_TX	UART interface	P1_6
3	UART_CTS	UART interface	P1_4
4	UART_RX	UART interface	P1_7
5	NC	NC	P2_1
6	NC	NC	P2_2
7	NC	NC	PIN2
8	NC	NC	PIN3
9	VCC	V3.3	VCC
10	NC	NC or VCC	
11	RESETB	Reset if low <100ms	RESET_N
12	GND	Ground	GND
13	PIO3	input/output pin	P1_1
14	PIO2	input/output pin/PWM	P1_0

## 7. System function

### How to wake up module from sleep mode?

There are two ways to wake up module from sleep mode, if module was in sleep mode..

7.1 Send "I am iron man, I am iron man, I am iron man I am iron....." string.

Yes, that's a joke, in sleep mode, you can send a long string (Length > 80 or more), that string can made module wake up, and you will receive "OK+WAKE" string from UART. Note: That wake up string is better not include any AT commands.

7.2 Long press system KEY  $\geq 1000$  ms.

After wake up module, you can send and receive AT commands.

### How to let module into sleep mode?

1. Send "AT+SLEEP" string through UART, if all is okay, module will return

- “OK+SLEEP” string and into sleep mode.
2. Execute “AT+PWRM1” command, Module will auto into sleep mode when power on or disconnect from remote device.

### System advert packet

In iOS system you can't get model MAC address directly. So we put MAC address information into advert packet.

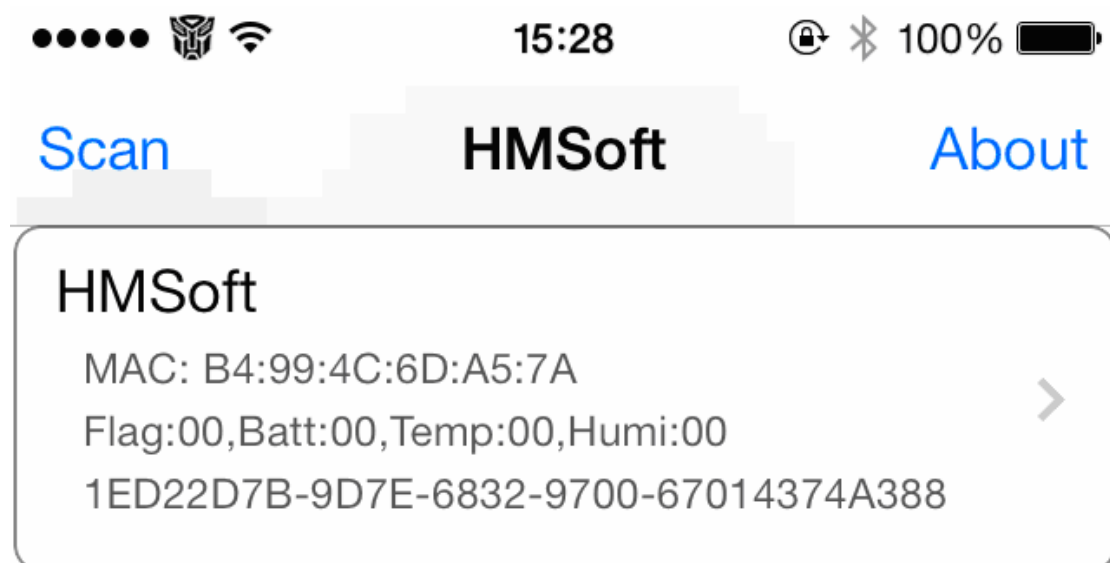

You can use CBAvertisementDataManufactureDataKey property to get it, MAC address information string format like follow:

Total length is 8 Bytes, First of two bytes is identify string, it always is 0x48 and 0x4D, the rest 6 bytes is MAC address string

For example: 0x48, 0x4D, 0xB4, 0x99, 0x4C, 0xXX, 0xXX, 0xXX

0x48 and 0x4D is “HM” string.

0xB4: 0x99: 0x4C: 0xXX: 0xXX: 0xXX is BLE MAC Address.

### System KEY function (PIO0)

Press if Low > 1000ms:

#### 7.3.1 If Module is in sleep mode

Module will wake up immediately, if AT+NOTI value is “1”, module will send “OK+WAKE” string through UART.

#### 7.3.2 If Module has already connected to remote device

Module will disconnect from remote device.

### 7.3.3 If Module is standby mode

Module will reset to default configuration. Then restart.

#### **System LED function (PIO1)**

In sleep mode, LED has turned off.

If AT+PIO10 is setup

Unconnected status: Output High 500 ms, Low 500 ms

Connected status: Output High

If AT+PIO11 is setup

Unconnected status: Output Low.

Connected status: Output High.

#### **System work Mode**

##### A) Mode 0(Transmission mode):

Before connect, you can configure module parameters with AT Commands

After connect, you can send and receive Bluetooth data through UART.

##### B) Mode 1(PIO acquisition mode):

Before connect, you can configure module parameters with AT Commands

After connect

- 1) Send and receive Bluetooth data through UART.
- 2) Remote device could configure module parameters with AT Commands
- 3) Remote device could control PIO2 and PIO3 output low or high with AT

Commands

HM-11 has no this function

- 4) Remote device could get PIO4 ~ 11 input status with AT Commands

HM-11 only has PIO2 and PIO3.

##### C) Mode 2 (Remote control mode):

Before connect, you can configure module parameters with AT Commands

After connect:

- 1) Send and receive Bluetooth data through UART.
- 2) Remote device could configure module parameters with AT Commands
- 3) Remote device could control PIO2~11 output low or high

HM-11 only has PIO2 and PIO3.

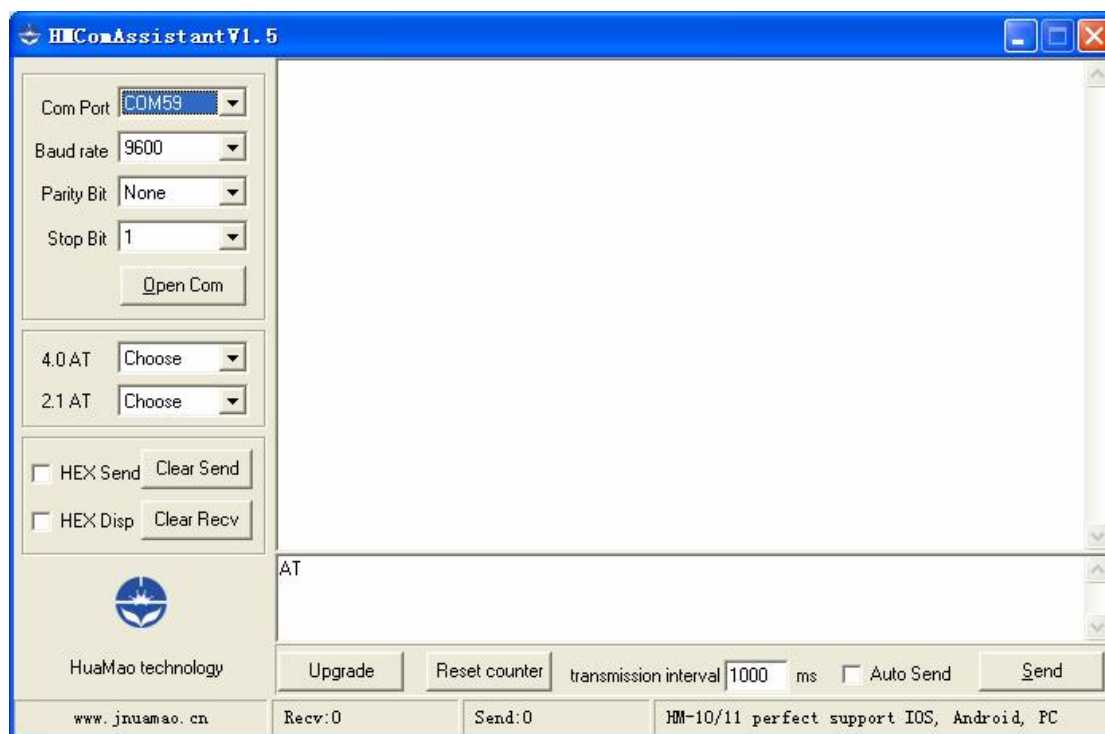

## 8 AT Commands

Factory default setting:

Name: HMSoft; Baud: 9600, N, 8, 1; Pin code: 000000; Peripheral Role; transmit mode.

AT Command format:

Uppercase AT command format. string format, without any other symbol. (e.g. \r or \n).

On Transmit version: Only accept AT Command from UART interface when Bluetooth device is not connected with remote device.

On Remote version: Can accept AT Command from UART interface when Bluetooth Device is not connected with remote device, Also can accept AT Command from remote Bluetooth device when connected that.

On PIO collection version: Only accept AT Command from UART interface when Bluetooth device is not connected with remote device.

### 1. Test Command or Disconnect Command

Send	Receive	Parameter
AT	OK OK+LOST	None

If Module is not connected to remote device will receive: "OK"

If Module has connected, module will disconnected from remote device, if "AT + NOTI" is setup to 1, will receive: "OK+LOST"

## 2. Query module address

Send	Receive	Parameter
AT+ADC[P1]?	OK+GET:0.00	P1: 3,4,5,6,7,8,9,A,B map to PIO3~PIOB

HM-11 has no this function.

Add since V526.

## 3. Query module address

Send	Receive	Parameter
AT+ADDR?	OK+ADDR:MAC Address	None

## 3. Query/Set Advertising interval

Send	Receive	Parameter
AT+ADVI?	OK+ Get:[P1]	None
AT+ADVI[P1]	OK+ Set:[P1]	P1: 0 ~ F 0: 100ms 1: 152.5 ms 2: 211.25 ms 3: 318.75 ms 4: 417.5 ms 5: 546.25 ms 6: 760 ms 7: 852.5 ms 8: 1022.5 ms 9: 1285 ms

		A: 2000ms B: 3000ms C: 4000ms D: 5000ms E: 6000ms F: 7000ms Default: 9 HMSoft Default: 0 HMSensor Default: 9
--	--	--

The maximum 1285ms recommendations form the IOS system. That is to say, 1285ms is apple allowed, but in response to scan and connected all the time will be long.

This command is added since V517 version.

V522 allow max value F.

#### 4. Query/Set Advertising Type

Send	Receive	Parameter
AT+ADTY?	OK+ Get:[P1]	None
AT+ADTY[P1]	OK+ Set:[P1]	P1: 0 ~ 3 0: Advertising ScanResponse, Connectable 1: Only allow last device connect in 1.28 seconds 2: Only allow Advertising and ScanResponse. 3: Only allow Advertising Default: 0

Added since V519

#### 5. Query/Set apple ANCS switch

Send	Receive	Parameter
------	---------	-----------

AT+ANCS?	OK+ Get:[P1]	None
AT+ANCS[P1]	OK+ Set:[P1]	P1: 0 ~ 1 0: Off 1: On Default: 0

Note1: This command added in V524.

Note2: Please send AT+RESET to restart module if you set value 1.

Note3: Must execute AT+TYPE3 first.

#### 6. Query/Set white list switch

Send	Receive	Parameter
AT+ALLO?	OK+ Get:[P1]	None
AT+ALLO[P1]	OK+ Set:[P1]	P1: 0 ~ 1 0: Off 1: On Default: 0

Note1: This command added in V523.

Note2: White List allows three MAC address link to module. Please use AT+AD command set white list MAC address.

#### 7. Query/Set white list MAC address

Send	Receive	Parameter
AT+AD[P1]??	OK+ Get:[P2]	None
AT+ALLO[P1][P2]	OK+ Set:[P2]	P1: 1, 2, 3 P2: MAC address P1 default: 0

Note1: This command added in V523.

E.g.

Send AT+ID1001122334455

Recv OK+Set:001122334455

#### 8. Query/Set Module pin output state, After power supplied

Send	Receive	Parameter
AT+BEFC?	OK+ Get:[P1]	None
AT+BEFC[P1]	OK+ Set:[P1]	P1: 000~ 3FF Default: 000

This command added in V527.

3FF == 001111111111, left to right side is map to PIO0~PIOB, PIO0 and Plo1 is used by system. Only Pio2~PIOB pins is available.

e.g. Set PIO2~PIOB all output high after power supplied.

Send: AT+BEFC3FF

Recv:OK+Set:3FF

When next time power on, module PIO2~PIOB will output high.

Note: Query PIO pins current state please use AT+PIO?? Command.

Note: Please don't use this command when "AT+MODE1" is setup.

#### 9. Query/Set Module pin output state, After connection is established

Send	Receive	Parameter
AT+AFTC?	OK+ Get:[P1]	None
AT+AFTC[P1]	OK+ Set:[P1]	P1: 000~ 3FF Default: 000

This command added in V527.

3FF == 001111111111, Left to right side is map to PIO0~PIOB, PIO0 and Plo1 is used by system. Only Pio2~PIOB pins is available.

e.g. Set PIO2~PIOB all output high when connection is established.

Send: AT+AFTC3FF

Recv: OK+Set:3FF

When Bluetooth connection is established, module PIO2~PIOB will output high.

Note: Query PIO pins current state please use "AT+PIO??" command.

Note: Please don't use this command when "AT+MODE1" is setup.

#### 10. Query/Set battery monitor switch

Send	Receive	Parameter
------	---------	-----------

AT+BATC?	OK+ Get:[P1]	None
AT+BATC[P1]	OK+ Set:[P1]	P1: 0 ~ 1 0: Off 1: On Default: 0

This command added in V520

## 11. Query battery information

Send	Receive	Parameter
AT+BATT?	OK+BATT:[P1]	P1: 000~100

There has three ways to get battery information:

- Before establishing a connection, Send “AT+BATT?” through UART.
- After established a connection, In Mode 1 or 2, remote side send “AT+BATT?”

Battery information has included in scan response data package, one hour update once. You can use Android or IOS discovery module, when module has been discovered, you can get it from scan result array.

Data format is 0x02, 0x16, 0x00, 0xB0, [FLAG], [temperature], [ humidity], [battery].

Android:

Included in OnLeScan function result array, you can see it direct.

```
private BluetoothAdapter.LeScanCallback mLeScanCallback = new BluetoothAdapter.LeScanCallback() {

    @Override

    public void onLeScan(final BluetoothDevice device, int rssi,

        byte[] scanRecord) {

        .....<Other code>.....

        String sBatt = ""; //Battery

        String sTemp = ""; //Temperature

        String sHumi = ""; //Humidity

        for(int i = 0; i < scanRecord.length; i++)

        {

            if(i + 7 < scanRecord.length)

            {
```

```

//Since V522

if(scanRecord[i] == 0x07 && scanRecord[i + 1] == 0x16

    && scanRecord[i + 2] == 0x00 && scanRecord[i + 3] == 0xB0)

{

    if(scanRecord[i + 7] > 0)

        sBatt = String.valueOf(scanRecord[i + 7]);

    if(scanRecord[i + 5] > 0)

        sTemp = String.valueOf(scanRecord[i + 5]);

    if(scanRecord[i + 6] > 0)

        sHumi = String.valueOf(scanRecord[i + 6]);

}

}

}

.....<Other code>.....

}

};

```

iOS:

- c. Included in LeScan function result NSDictionary struct, service id is 0xB000.

## 12. Set battery information byte in advertising data

Send	Receive	Parameter
AT+BATT[P1]	OK+Set:[P1]	P1: 0x00~0xFF Not include '?'

This command is used to set battery information byte in advertising data when you doesn't want to use battery function buy want to use as AT+FLAG command.

## 13. Query/Set Bit format

Send	Receive	Parameter
AT+BIT7?	OK+Get:[P1]	P1: bit7 switch.

AT+BIT7[P1]	OK+Set:[P1]	0-----Not compatible 1-----Compatible Default: 0
-------------	-------------	--

This command is used only for compatible uses 7 data bits, 2 stop bit device.

#### 14. Query/Set baud rate

Send	Receive	Parameter
AT+BAUD?	OK+Get:[P1]	P1: Baud rate No.
AT+BAUD[P1]	OK+Set:[P1]	0-----9600 1-----19200 2-----38400 3-----57600 4-----115200 5-----4800 6-----2400 7-----1200 8-----230400 Default: 0(9600)

e.g.

Query baud:

Send: AT+BAUD?

Receive: OK+Get:0

Setup baud:

Send: AT+BAUD1

Receive: OK+Set:1

Note: If setup to Value 7, After next power on, module will not support any AT Commands, until PIO0 is pressed, Module will change Baud to 9600.

#### 15. Query/Set Minimum Link Layer connection interval

Send	Receive	Parameter
AT+COMI?	OK+Get:[P1]	P1: 0 ~ 9

AT+COMI[P1]	OK+Set:[P1]	Default: 3(20ms)
-------------	-------------	------------------

P1 Value: 0: 7.5ms; 1: 10ms; 2: 15ms; 3: 20ms; 4: 25ms; 5: 30ms; 6: 35ms; 7: 40ms;  
8: 45ms; 9: 4000ms

Note: This command is added since V538

#### 16. Query/Set Maximum Link Layer connection interval

Send	Receive	Parameter
AT+COMA?	OK+Get:[P1]	P1: 0 ~ 9
AT+COMA[P1]	OK+Set:[P1]	Default: 7(40ms)

P1 Value: 0: 7.5ms; 1: 10ms; 2: 15ms; 3: 20ms; 4: 25ms; 5: 30ms; 6: 35ms; 7: 40ms;  
8: 45ms; 9: 4000ms

Note: This command is added since V538

#### 17. Query/Set Link Layer connection slave latency

Send	Receive	Parameter
AT+COLA?	OK+Get:[P1]	P1: 0 ~ 4
AT+COLA[P1]	OK+Set:[P1]	Default: 0

Note: This command is added since V538

#### 18. Query/Set connection supervision timeout

Send	Receive	Parameter
AT+COSU?	OK+Get:[P1]	P1: 0 ~ 6
AT+COSU[P1]	OK+Set:[P1]	Default: 6(6000ms)

P1 Value: 0: 100ms; 1: 1000ms; 2: 2000ms; 3: 3000ms; 4: 4000ms; 5: 5000ms; 6:  
6000ms;

Note: This command is added since V538

#### 19. Query/Set The Switch of update connection Parameter

Send	Receive	Parameter
AT+COUP?	OK+Get:[P1]	P1: 0 ~ 1
AT+COUP[P1]	OK+Set:[P1]	0: Don't update 1: Update Default: 1(update)

This command is only use when module is in slave role.

Note: This command is added since V538

## 20. Query/Set Characteristic

Send	Receive	Parameter
AT+CHAR?	OK+Get:[P1]	P1: 0x0001~0xFFFE
AT+CHAR[P1]	OK+Set:[P1]	Default: 0xFFE1

e.g. change characteristic value to 0xAAA0

Send: AT+CHAR0xAAA0

Recv: OK+Set:0xAAA0

## 21. Clear Last Connected device address

Send	Receive	Parameter
AT+CLEAR	OK+CLEAR	None

Notice: Only Central role is used.

## 22. Try connect to last succeeded device

Send	Receive	Parameter
AT+CONNL	OK+CONN[P1]	P1: L, E, F, N L: Connecting E: Connect error F: Connect Fail N: No Address

Notice: Only Central role is used. Must set up AT+IMME1 and AT+ROLE1 first.

If remote device has already connected to other device or shut down,  
“OK+CONNF” will received after about 10 seconds.

## 23. Try connect an address

Send	Receive	Parameter
AT+CO[P0][P1]	OK+CO[P0][P0][P2]	P0: N, 0, 1, 2 N: Normal Address 0: Static MAC 1: Static random MAC

		2: Random MAC P1: Address Like: 0017EA090909 P2: A, E, F A: Connecting E: Connect error F: Connect Fail
--	--	---

Notice: Only central role is used. Must set up AT+IMME1 and AT+ROLE1 first.

If remote device has already connected to other device or shut down, "OK+CONN" will received after about 10 Seconds.

e.g.

Try to connect an device which MAC address is 00:17:EA:09:09:09

Send: AT+CON0017EA090909

May receive a reply:

OK+CONNA ===== Accept request, connecting

OK+CONNE ===== Connect error

OK+CONN ===== Connected, if AT+NOTI1 is setup

OK+CONN F ===== Connect Failed, After 10 seconds

Note: O is not zero

#### 24. Connect to an Discovered device

Send	Receive	Parameter
AT+CONN[P1]	OK+CONN[P2]	P1: 0~5 P2: E, F, 0~5 E: Link error F: Link failed 0~5: Try to connect

This command is use after execute AT+DISC?

When AT+DISC? Command return first device use P1 as 0, then second device use P1 as 1, third device use P1 as 2.

This command will clear all discovery data.

## 25. Query PIO04~PIO11 input(output) state

Send	Receive	Parameter
AT+COL??	OK+ Col:[P1]	P1: 0x00~0xFF

P1 is a byte, has 8 bits, bit 7 ~ bit 0 is map to the PIO4 ~ PIO11.

This command is added since V515 version.

## 26. Query/Set PIO collection rate

Send	Receive	Parameter
AT+CYC??	OK+ Get:[P1]	P1: 00~99 Unit: seconds Default: 10
AT+CYC[P1]	OK+ Set:[P1]	

In mode 1, when PIO state is change, module will send OK+Col:[xx] to UART or remote side. This command is set send interval.

This command is added since V515 version.

## 27. Query/Set The switch of study function

Send	Receive	Parameter
AT+COMP?	OK+ Get:[P1]	P1: 0, 1, ? ?: Query; 0: Off; 1: On Default: 0
AT+COMP[P1]	OK+ Set:[P1]	

Please reference <How\_To\_Use\_HM-1x\_Study\_function.pdf>

This command is added since V542 version.

## 28. Start a device discovery scan

Send	Receive	Parameter
AT+DISC?	OK+DIS[P0][P1]	P0: C,0, 1, 2 C: Common string 0~2: Address type P1: S, E, [MAC String] S: Start discovery E: End discovery

		MAC String : Device MAC string
--	--	-----------------------------------

Please set AT+ROLE1 and AT+IMME1 first.

e.g.

Send: AT+DISC?

Recv: OK+DISCS

Recv: OK+DIS[P0]:123456789012 (discovered device address information)

If AT+SHOW1 is setup, you will receive then Name information as follow

Recv: OK+NAME: xxx

After send Name value, will send two extra “\r\n” value ASCII byte

If AT+SHOW2 is setup, you will receive then RSSI information as follow

Recv: OK+RSSI: xxx\r\n

If AT+SHOW3 is setup, you will receive then RSSI information and Name information

Recv: OK+DIS[P0]:234567890123

Recv: OK+NAME: xxx

After send Name value, will send two extra “\r\n” value ASCII byte

.....(Before V535 max results is 6, Since V535 not limit)

Recv: OK+DISCE

### Connect use array index:

Connect to a discovered device: AT+CONN0, AT+CONN1.....AT+CONN5

**Connect use MAC string:** AT+CON[MAC String]

### 29. Start a iBeacon device discovery scan

Send	Receive	Parameter
AT+DISI?	OK+DISC[P0:P1:P2:P3:P4]	P0: Factory ID P1: iBeacon UUID P2: Major Value Minor Value Measured Power P3: MAC

		P4: RSSI
--	--	----------

Please set AT+ROLE1 and AT+IMME1 first.

e.g.

Send: AT+DISI?

Recv: OK+DISCS (Scan start)

Recv: OK+DIS[P0:P1:P2:P3:P4] (if have one device)

Recv: OK+DIS[P0:P1:P2:P3] (if have two devices)

.....

Recv: OK+DISCE (Scan end)

P0 length is 8; P1 length is 32; P2 length is 10; P3 length is 12, P4 length is 4

P2 include Major Value (length 4);

Minor Value (length 4);

Measured Power (length 2)

If the device not enable iBeacon function, P0, P1, P2 will use '0' fill.

Note: Added since V539

### 30. Start a full information device discovery scan

Send	Receive	Parameter
AT+DISA?	OK+DISAS -> Start scan OK+DISC[P0:P1:P2:P3:P4] OK+DISAE -> Scan finished	P0: Device MAC (6Byte) P1: Device Type(1Byte) P2: Device RSSI(1Byte) P3: Rest Data Length (1Byte) P4: Rest Data

Please set AT+IMME1 and AT+ROLE1 first.

Note: All data is in Hex format.

Added in V547

### 31. Query/Set iBeacon deploy mode

Send	Receive	Parameter
AT+DELO[P1]	OK+DELO[P1]	P1: 1, 2

		1: Allowed to broadcast and scanning 2: Only allow broadcast
--	--	---

After receive OK+DELO[P1], module will reset after 500ms.

This command will let module into non-connectable status until next power on.

### 32. Remove bond information

Send	Receive	Parameter
AT+ERASE	OK+ERASE	

Note: Added in V524 version.

### 33. Set module use one Characteristic or two Characteristic UUID

Send	Receive	Parameter
AT+FFE2[P1]	OK+ Set:[P1]	P1: ?, 0, 1, 2 ?: Query 0: Only use one Characteristic 2: Use two Characteristic Second Char value = first Char value + 1 3: Use two Characteristic Second Char value = first Char value - 1

Note: This command added since V550.

### 34. Set advertising data FLAG byte

Send	Receive	Parameter
AT+FLAG[P1]	OK+ Set:[P1]	P1: 0~FF (one byte)

Note: This command added in V530. Please ref to AT+BATT? Command.

### 35. Query/Set UART flow control switch

Send	Receive	Parameter
AT+FIOW?	OK+ Get:[P1]	P1: 0, 1 0: Off 1: On Default: 0
AT+FIOW[P1]	OK+ Set:[P1]	

## 36. Query/Set module RX gain

Send	Receive	Parameter
AT+GAIN?	OK+ Get:[P1]	P1: 0, 1  0: No RX gain 1: Open RX gain  Default: 0
AT+GAIN[P1]	OK+ Set:[P1]	

Note: This command is added since V535

## 37. System Help Information

Send	Receive	Parameter
AT+HELP?	Help Information	None

## 38. Set Humi information byte in advertising data

Send	Receive	Parameter
AT+HUMI[P1]	OK+Set:[P1]	P1: 0x00~0xFF

This command is used to set humi information byte in advertising data when you doesn't want to use humi function buy want to use as AT+FLAG command.

Added in V544

## 39. Query/Set Module work type

Send	Receive	Parameter
AT+IMME?	OK+ Get:[P1]	P1: 0, 1  1: When module is powered on, only respond the AT Command, don't do anything. Until AT + START, AT+CON, AT+CONNL commands is received.  0: When power on, module will start work immediately  Default: 0
AT+IMME[P1]	OK+ Set:[P1]	

This command is only used for Central role.

## 40. Query/Set Module iBeacon switch

Send	Receive	Parameter
AT+IBEA?	OK+Get:[P1]	P1: 0, 1  0: Turn off iBeacon 1: Turn on iBeacon  Default: 0
AT+IBEA[P1]	OK+Set:[P1]	

iBeacon UUID is: 74278BDA-B644-4520-8F0C-720EAF059935.

This command is added since V517 version.

#### 41. Query/Set iBeacon UUID

Send	Receive	Parameter
AT+IBE0?	OK+Get:[P1]	P1: 00000001~  FFFFFFFFE  Default: 74278BDA
AT+IBE0[P1]	OK+Set:[P1]	

iBeacon UUID is: **74278BDA**-B644-4520-8F0C-720EAF059935.

This command can change red color string in iBeacon UUID.

This command is added since V520 version.

e.g.: Send: AT+IBE012345678 change iBeacon UUID red color string to "12345678"

#### 42. Query/Set iBeacon UUID

Send	Receive	Parameter
AT+IBE1?	OK+Get:[P1]	P1: 00000001~  FFFFFFFFE  Default: B6444520
AT+IBE1[P1]	OK+Set:[P1]	

iBeacon UUID is: 74278BDA-**B644-4520**-8F0C-720EAF059935.

This command can change red color string in iBeacon UUID.

This command is added since V520 version.

e.g.: Send: AT+IBE112345678 change iBeacon UUID red color string to "12345678"

#### 43. Query/Set iBeacon UUID

Send	Receive	Parameter
------	---------	-----------

AT+IBE2?	OK+Get:[P1]	P1: 00000001~ FFFFFFFE Default: 8F0C720E
AT+IBE2[P1]	OK+Set:[P1]	

iBeacon UUID is: 74278BDA-B644-4520-8F0C-720EAF059935.

This command can change red color string in iBeacon UUID.

This command is added since V520 version.

e.g.: Send: AT+IBE112345678 change iBeacon UUID red color string to "12345678"

#### 44. Query/Set iBeacon UUID

Send	Receive	Parameter
AT+IBE3?	OK+Get:[P1]	P1: 00000001~ FFFFFFFE Default: AF059935
AT+IBE3[P1]	OK+Set:[P1]	

iBeacon UUID is: 74278BDA-B644-4520-8F0C-720EAF059935.

This command can change red color string in iBeacon UUID.

This command is added since V520 version.

e.g.: Send: AT+IBE112345678 change iBeacon UUID red color string to "12345678"

#### 45. Query/Set Module iBeacon Marjor version

Send	Receive	Parameter
AT+MARJ?	OK+Get:[P1]	P1: 0x0001, 0xFFFFE Default: 0xFFE0
AT+MARJ[P1]	OK+Set:[P1]	

E.g. Change marjor version to 0x0102

Send: AT+MARJ0x0102, if all is okay, module will send back OK+Set: 0x0102

This command is added since V517 version.

#### 46. Query/Set Module iBeacon minor

Send	Receive	Parameter
AT+MINO?	OK+Get:[P1]	P1: 0x0001, 0xFFFFE Default: 0xFFE1
AT+MINO[P1]	OK+Set:[P1]	

This command is added since V517 version.

#### 47. Query/Set Module iBeacon Measured power

Send	Receive	Parameter
AT+MEAS?	OK+Get:[P1]	P1: 0x01~ 0xFF Default: 0xC5
AT+MEAS[P1]	OK+Set:[P1]	

This command is added since V519 version.

#### 48. Query/Set Module Work Mode

Send	Receive	Parameter
AT+MODE?	OK+Get:[P1]	P1: 0, 1, 2 0: Transmission Mode 1: PIO collection Mode + Mode 0 2: Remote Control Mode + Mode 0 Default: 0
AT+MODE[P1]	OK+Set:[P1]	

Mode 0:

Before establishing a connection, you can use the AT command configuration module through UART.

After established a connection, you can send data to remote side from each other.

Mode 1:

Before establishing a connection, you can use the AT command configuration module through UART.

After established a connection, you can send data to remote side. Remote side can do fellows:

Send AT command configuration module.

Collect PIO04 to the PIO11 pins input state of HM-10.

Collect PIO03 pins input state of HM-11.

Remote control PIO2, PIO3 pins output state of HM-10.

Remote control PIO2 pin output state of HM-11.

Send data to module UART port (not include any AT command and per package must less than 20 bytes).

Mode 2:

Before establishing a connection, you can use the AT command configuration module through UART.

After established a connection, you can send data to remote side. Remote side can do fellows:

Send AT command configuration module.

Remote control PIO2 to PIO11 pins output state of HM-10.

Remote control PIO2, PIO3 pins output state of HM-11.

Send data to module UART port (not include any AT command and per package must less than 20 bytes).

#### 49. Query/Set Notify information

Send	Receive	Parameter
AT+NOTI?	OK+Get:[P1]	P1: 0, 1
AT+NOTI[P1]	OK+Set:[P1]	0: Don't Notify 1: Notify Default: 0

If this value is set to 1, when link ESTABLISHED or LOSTED module will send OK+CONN or OK+LOST string through UART.

#### 50. Query/Set notify mode

Send	Receive	Parameter
Q: AT+NOTP?	OK+ Get[P1]	P1: 0, 1; default: 0
Q: AT+NOTP[P1]	OK+ Set[P1]	0: without address 1: with address

This command must work with "AT+NOTI1", if this switch is open, when the module connect to disconnect, the prompt string will include the remote address.

OK+CONN:001122334455 String "001122334455" is the MAC address string

Added since V534

#### 51. Query/Set Module name

Send	Receive	Parameter
AT+NAME ?	OK+NAME[P1]	P1: module name, Max length is 12. Default: HMSoft
AT+NAME[P1]	OK+Set[P1]	

e.g.

change module name to bill\_gates

Send: AT+NAMEbill\_gates

Receive: OK+SetName:bill\_gates

#### 52. Query/Set output driver power

Send	Receive	Parameter
Query: AT+PCTL?	OK+Get:[P1]	None
Set: AT+PCTL[P1]	OK+Set:[P1]	P1: 0,1 0:Normal power output 1:Max power output Default: 1

Noted: Added in V527

#### 53. Query/Set Parity bit

Send	Receive	Parameter
Query: AT+PARI?	OK+Get:[P1]	None
Set: AT+PARI[P1]	OK+Set:[P1]	P1: 0,1,2 0:None 1:ODD 2:EVEN Default: 0 (None)

#### 54. Query/Set PIO1 output status (System LED)

Send	Receive	Parameter
AT+PIO1?	OK+Get:[P1]	P1: 0, 1

AT+ PIO1 [P1]	OK+Set:[P1]	0: Unconnected Output 500ms High 500ms Low, Connected output High. 1: Unconnected output Low, Connected output High. Default: 0
---------------	-------------	--

55. Query/Set PIO pins output high or low (Only this time, when module next power on, this value is not be used)

Send	Receive	Parameter
AT+PIO[P1]?	OK+PIO:[P1][P2]	P1: 2~B, ?
AT+PIO[P1][P2]	OK+PIO:[P1][P2]	P2: 0, 1, ? HM-11 only has 4 pins. P1 is which PIO pin you want to Query/Set Value: 2,3,4,5,6,7,8,9,A,B. P2 is Query or setup value. "0" is low and "1" is high and "?" is query

e.g.

Query PIO2

Send: AT+PIO2?

Setup PIO2 output high

Send: AT+PIO21

Receive: OK+PIO21

HM-10 HMSensor version: P1 value is 2~A

HM-10 HMSoft version: P1 value is 2~B

HM-11 HMSensor version: P1 value is 2

HM-11 HMSoft version: P1 value is 2, 3

V525 added PIO2 PWM function, P2 value is 0~9

0: output low

1: output high

2: output 100ms PWM

3: output 200ms PWM

.....

9: output 800ms PWM

V527 added AT+PIO?? Format query all pins output state.

#### 56. Query/Set Pin Code

Send	Receive	Parameter
AT+PASS?	OK+Get:[P1]	P1 is Pin Code,
AT+PIN[P1]	OK+Set:[P1]	000000~999999 Default: 000000

e.g.

Query Pin Code

Send: AT+PIN?

Receive: OK+PIN:000000

Setup Pin Code 008888

Send: AT+PIN008888

Receive: OK+Set:008888

#### 57. Query/Set Module Power

Send	Receive	Parameter
AT+POWE?	OK+Get:[P1]	None
AT+ POWE [P1]	OK+Set:[P1]	P1: 0 ~ 3 0: -23dbm 1: -6dbm 2: 0dbm 3: 6dbm Default: 2

#### 58. Query/Set Module sleep type

Send	Receive	Parameter
AT+PWRM?	OK+Get:[P1]	None
AT+PWRM[P1]	OK+Set:[P1]	P1: 0~1 0:Auto sleep 1:don't auto sleep Default: 1

Only support peripheral role.

#### 59. Query/Set reliable advertising mode

Send	Receive	Parameter
AT+RELI?	OK+ Get:[P1]	P1: 0, 1 0: Normal advertising 1: Reliable advertising Default: 0
AT+RELI[P1]	OK+ Set:[P1]	

Note: This command is added since V530

#### 60. Restore all setup value to factory setup

Send	Receive	Parameter
AT+RENEW	OK+RENEW	None

#### 61. Restart module

Send	Receive	Parameter
AT+RESET	OK+RESET	None

#### 62. Query/Set Master and Slaver Role

Send	Receive	Parameter
AT+ROLE?	OK+Get:[P1]	P1: 0, 1 0: Peripheral 1: Central Default: 0
AT+ROLE[P1]	OK+Set:[P1]	

#### 63. Query RSSI Value

Send	Receive	Parameter
AT+RSSI?	OK+RSSI:[P1]	None

Require: AT+MODE value > 0

This command only used by Remote device query after connected.

#### 64. Query Last Connected Device Address

Send	Receive	Parameter
AT+RADD?	OK+RADD:MAC Address	None

#### 65. Query/Set Module Sensor work interval

Send	Receive	Parameter
AT+RAT??	OK+Get:[P1]	P1: 00~99
AT+RAT[P1]	OK+Set:[P1]	0:Save when connected 1:Don't Save Default: 0 Unit: minute

Note: This command is only use for HMSensor

#### 66. Query/Set Stop bit

Send	Receive	Parameter
AT+STOP?	OK+Get:[P1]	None
AT+STOP[P1]	OK+Set:[P1]	P1:0, 1 0: One stop bit 1: Two stop bit Default: 0 (One stop bit)

#### 67. Work immediately (Switch to auto work state)

Send	Receive	Parameter
AT+START	OK+START	None

This command is only used when AT+IMME1 is setup.

#### 68. Query Module into sleep mode

Send	Receive	Parameter
AT+SLEEP	OK+SLEEP	None

Only support Peripheral role.

#### 69. Query/Set Module save connected address information

Send	Receive	Parameter
AT+SAVE?	OK+Get:[P1]	None
AT+SAVE[P1]	OK+Set:[P1]	P1: 0~1 0:Save when connected 1:Don't Save Default: 0

Note: After power on, if module checked this information, module will try to connect it until AT+TCON command setting timeout or AT+CLEAR command to clear this information, then module will into discovery mode.

#### 70. Query/Set Module discovery time when module in master role

Send	Receive	Parameter
AT+SCAN?	OK+Get:[P1]	None
AT+SCAN[P1]	OK+Set:[P1]	P1: 1 ~ 9 Unit: Second Default: 3 Seconds

Note: Add in V543

#### 71. Query/Set sensor type on module PIO11(HM-11 is PIO3)

Send	Receive	Parameter
AT+SENS?	OK+Get:[P1]	P1: 0, 1, 2 0: None 1: DHT11 2: DS18B20 Default: 0
AT+SENS[P1]	OK+Set:[P1]	

Note: This command is use for HMSensor.

#### 72. Query/Set if show device information when discovery

Send	Receive	Parameter
AT+SHOW?	OK+Get:[P1]	None
AT+SHOW[P1]	OK+Set:[P1]	P1: 0, 1, 2 0:Don't show information

		1:Show name 2: Show RSSI 3: Show RSSI and Name Default: 0
--	--	--

If AT+SHOW1 is setup, AT+DISC? Command will add the device name information into scan result package.

If AT+SHOW2 is setup, AT+DISC? Command will add device rssi information into scan result package.

If AT+SHOW3 is setup, AT+DISC? Command will add device name and rssi information into scan result package.

#### 73. Query/Set Module Sensor Temperature and humidity(if has a sensor)

Send	Receive	Parameter
AT+TEHU?	OK+Get:[P1][P2]	P1: 000~120 P2: 000~100

Note: This command is only use for HMSensor version.

This value is added into scan response data package.

Data format is 0x02, 0x16, 0x00, 0xB0, [reserved], [temperature], [ humidity], [battery].

Android:

Included in OnLeScan function result array, you can see it direct.

iOS:

Included in LeScan function result NSDictionary struct, service id is 0xB000.

#### 74. Query DS18B20 Sensor or IC temperature

Send	Receive	Parameter
AT+TEMP?	OK+Get:[P1]	P1: 000.000~255.000

Note1: if not setup AT+SENS value, will get IC temperature.

Note2: Added in V523 version, Modified at V544.

#### 75. Set temperature information byte in advertising data

Send	Receive	Parameter
AT+TEMP[P1]	OK+Set:[P1]	P1: 0x00~0xFF Not include '?'

This command is used to set temperature information byte in advertising data when you doesn't want to use temperature function buy want to use as AT+FLAG command.

Added in V544

#### 76. Query/Set module connect remote device timeout value

Send	Receive	Parameter
AT+TCON?	OK+Get:[P1]	None
AT+TCON[P1]	OK+Set:[P1]	P1 is timeout value. When time is up, module will not connect this address anymore, then enter search mode.  P1 allowed value: 000000~999999  Unit is ms.  Default: 000000 Connect forever

This value is only used for Central Role, when module has Last Connected address.

#### 77. Query/Set Module Bond Mode

Send	Receive	Parameter
AT+TYPE?	OK+Get:[P1]	None
AT+TYPE[P1]	OK+Set:[P1]	P1: 0~2 0:Not need PIN Code 1:Auth not need PIN 2:Auth with PIN

		3:Auth and bond Default: 0
--	--	-------------------------------

**Important: If your module version is less than V515, please don't use this command.**

**Under android 4.3 AT+TYPE1 is same to AT+TYPE2.**

**Note: Value 3 is added in V524.**

#### 78. Query/Set service UUID

Send	Receive	Parameter
AT+UUID?	OK+Get:[P1]	P1: 0x0001~0xFFFE
AT+UUID[P1]	OK+Set:[P1]	Default: 0xFFE0

e.g. Change UUID value to 0xAAA0

Send: AT+UUID0xAAA0

Recv: OK+Set:0xAAA0

#### 79. Query/Set UART sleep type

Send	Receive	Parameter
AT+UART?	OK+Get:[P1]	P1: 0~1
AT+UART[P1]	OK+Set:[P1]	0: When module into sleep mode, you can wake up module through UART. 1: When module into sleep mode, also shutdown UART. Default: 0xFFE0

Note: This command is only use for HMSensor version.

#### 80. Query Software Version

Send	Receive	Parameter
AT+VERR? AT+VERS?	Version Information	None
